

Hvordan overlever data engineering i AI bølgen

... og hvordan det kan påvirke andre konsulenter

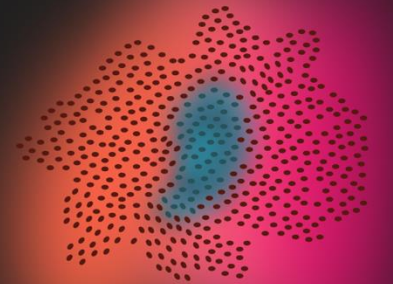

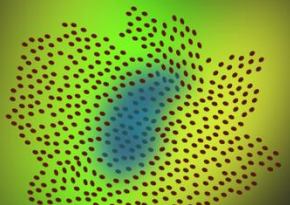

Hva er en Data Engineer?

“Data engineering is the practice of designing and building systems for the aggregation, storage and analysis of data at scale. Data engineers empower organizations to get insights in real time from large datasets.” – IBM

Agent drevet har åpnet døren for lettere adhoc analyser gjennom chatgrensesnitt

The image displays three overlapping web interfaces, each representing a different AI-powered tool or platform:

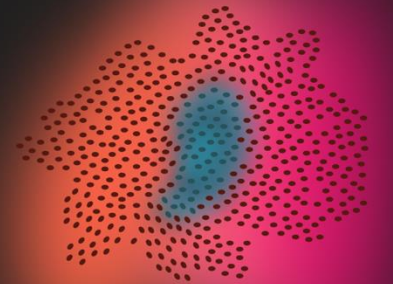

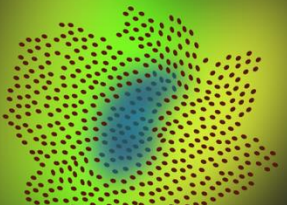

- Amazon Quick - AI Assistant:** The interface shows the Amazon Quick AI Assistant page. It features a navigation bar with links like 'Overview', 'For roles', 'Features', 'Case studies', 'Pricing', 'Enterprise', and 'FAQs'. The main heading is 'Amazon Quick - AI Assistant', followed by a subheading 'Amazon Quick changes how you work. Set it up in minutes by the end of the day, you'll wonder how you ever worked without it.' A 'Try Quick for free' button is visible.
- Canva:** The Canva interface shows the 'Find the story in your numbers with AI data analysis' section. It includes a subheading 'Uncover patterns, trends, and key takeaways in your data and transform them into clear, compelling visuals and summaries with Magic Insights (Pro), Canva's AI data analytics tool.' A 'Analyze data with AI' button is present.
- Omni:** The Omni interface shows the 'The AI analytics platform' section. It features a subheading 'Omni turns your data into a source of truth for AI, so anyone can get answers they trust.' A 'Free Trial' button is visible. Below this, there is a section titled 'Deal Distribution: Enterprise vs Other' with a donut chart showing the distribution of deals. The chart indicates that 26 deals (8%) were in the Enterprise segment, while 313 deals (92%) were in the Other segment. The average deal size for Enterprise is \$2M IARR (\$76.9K avg).

At the bottom of the Omni interface, there is a footer with logos for various partners and a search bar.

PROPELL

Dette er situasjonen i en perfekt verden....

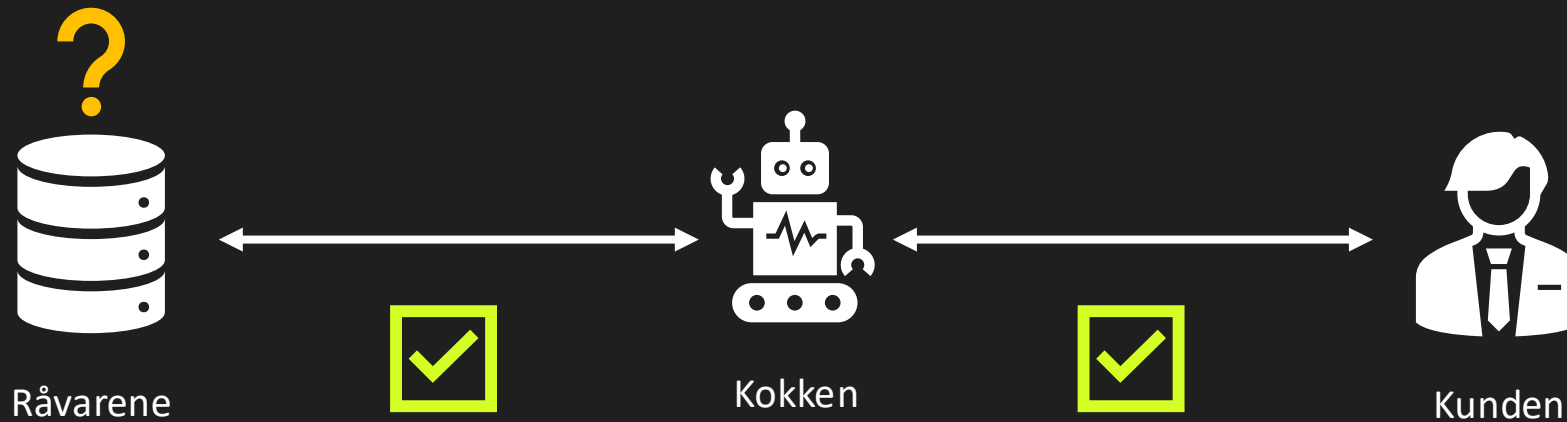

PROPELL

Virkeligheten kan være litt mer rotete

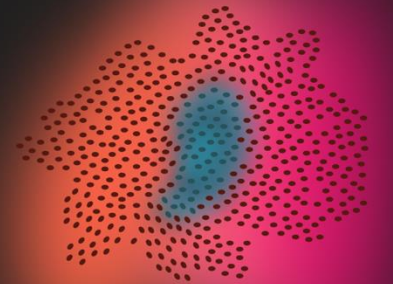

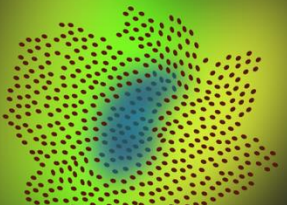

PROPELL

Problemet selskaper står ovenfor er selve **dataen** agenten bruker

PROPELL

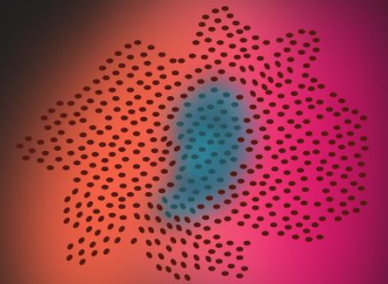

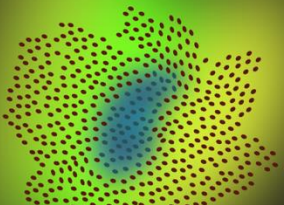

Men hva er problemet med dette?

PROPELL

Men hva er problemet med dette?

Jeg må vite hvor
mange aktive
kunder vi har før
styremøtet

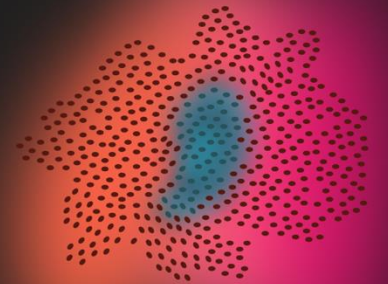

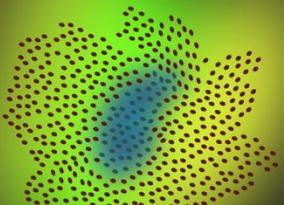

PROPELL

Men hva er problemet med dette?

Jeg må vite hvor
mange aktive
kunder vi har før
styremøtet

Aktiv kunde =
aktivitet siste
30 dager

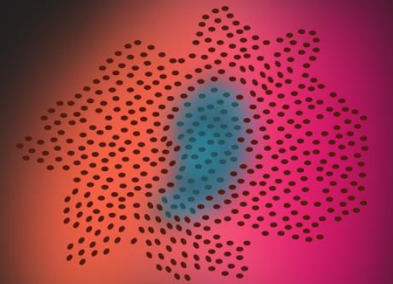

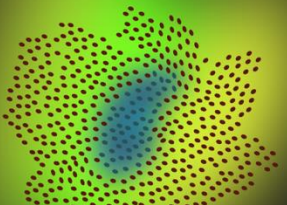

PROPELL

Brukerne stiller et spørsmål til agenten.

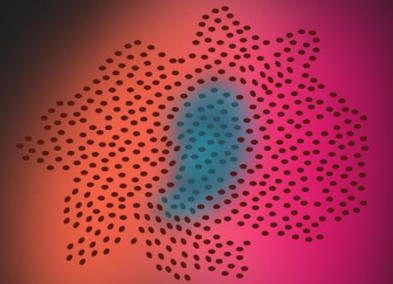

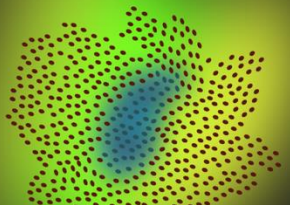

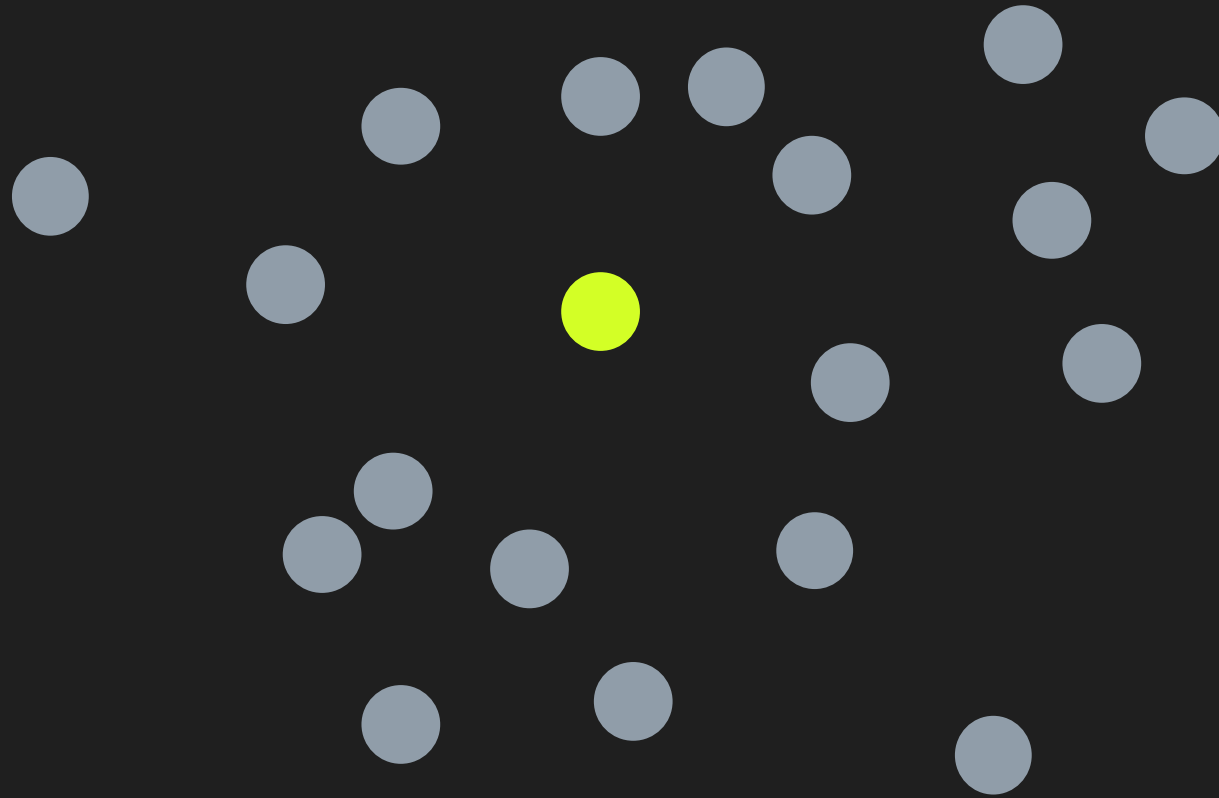

Hvor mange aktive brukere har vi?

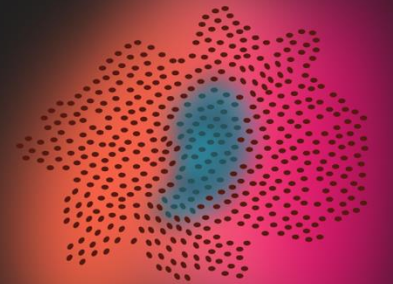

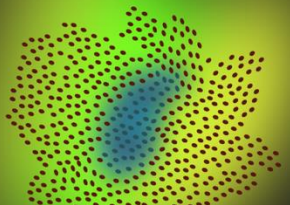

PROPELL

Spørsmål og data plasseres sammen i et flerdimensjonalt rom

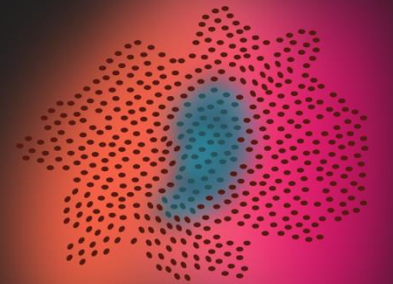

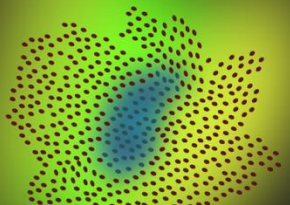

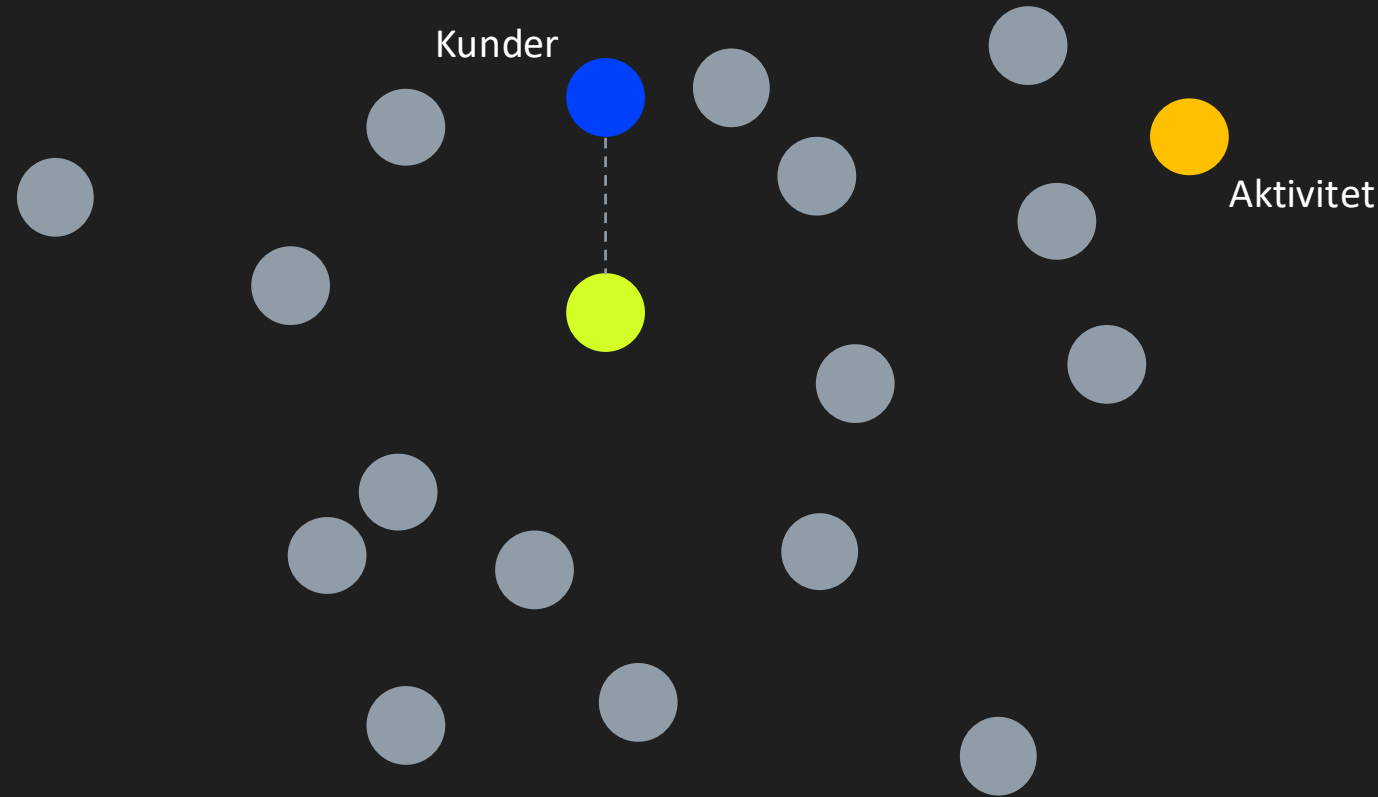

PROPELL

Agenten finner dataen som er mest relevant ved å se på korteste avstand mellom spørsmål og data

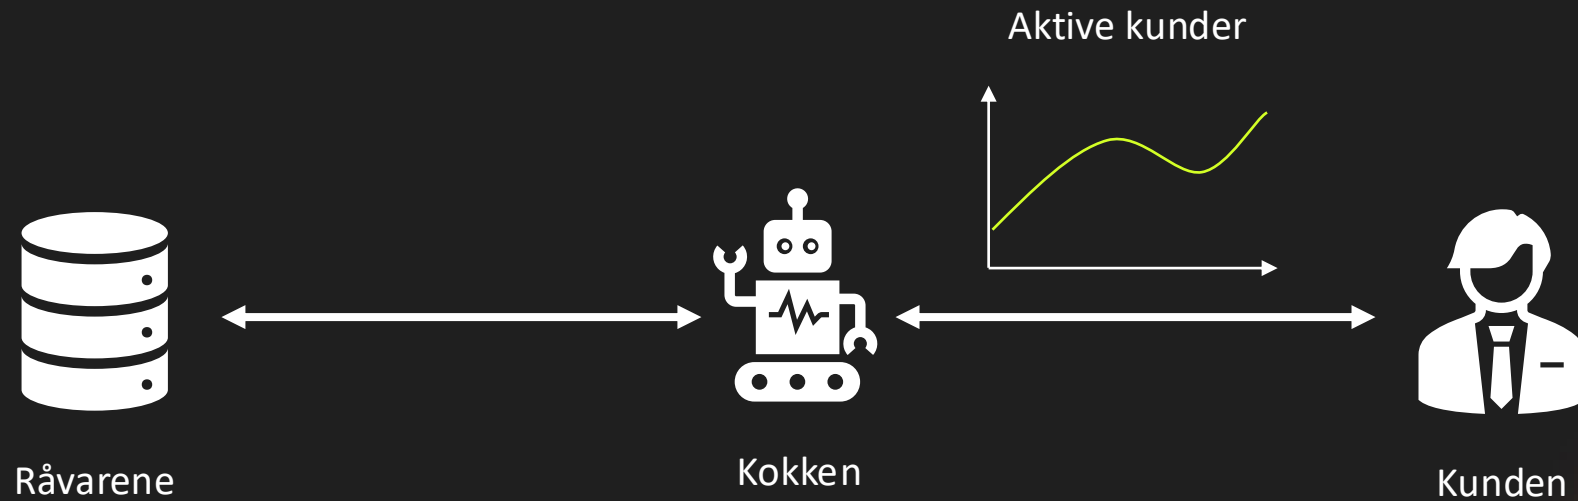

PROPELL

Hvis det flerdimensjonale rommet ikke speiler virkeligheten, går man glipp av viktig data

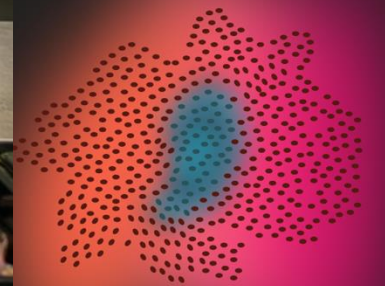

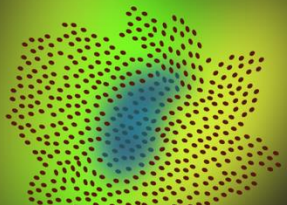

PROPELL

Analysene som leveres gir ingen verdi
